Place a big bucket in the ante or buffer room to be used for collecting used goggles following to doffing PPE	√																				
Fill in the bucket with 75% ethanol. Make sure to completely immerse all the goggles used by technologists.																					
All laboratory personnel should dump in the used goggles in the bucket and then cover it properly to avoid ethanol evaporation																					
Leave all the goggles to be completely soaked in the 75% ethanol solution for at least 8 hours or more.																					
Disinfect the outside surface of the bucket with 75% ethanol and then take it to the sink																					
Take out the goggles, properly discard the used ethanol, and wash them with soap and warm water																					
Air dry the goggles, and then place them in cupboard to be used for the following shift.																					
Apply anti-fog spray (if available) before wearing the goggle, otherwise wipe the inside surface with soap.
